## PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience building end-to-end analytics solutions — from raw data ingestion and ETL to SQL querying, KPI dashboards, and business storytelling. Analysed 293,569 real-world order records across 3 datasets, uncovering a 54.8% late delivery rate and an \$80.9M revenue picture using Python, SQL Server, and Tableau. Skilled in star schema design, data cleaning, and translating complex data into actionable business insights. BCA graduate actively seeking a Data Analyst role.

## TECHNICAL SKILLS

**Languages & Tools:** Python · SQL Server · Pandas · NumPy · Matplotlib

**BI & Reporting:** Tableau · Power BI · Microsoft Excel

**Data Engineering:** ETL Pipelines · Star Schema Design · Data Cleaning · Data Validation

**Analytics:** KPI Analysis · EDA · Window Functions · CTEs · Root Cause Analysis

## PROJECTS

### RetailPulse — Supply Chain & Retail Analytics | *Personal Project*

GitHub: [github.com/imransamiya817-debug/RetailPulse](https://github.com/imransamiya817-debug/RetailPulse)

- Analysed 293,569 order records across 3 real-world datasets (ML-Dataset, DataCo, Olist) totalling \$80.9M in revenue using Python, Pandas, and NumPy.
- Identified DataCo's 54.8% late delivery rate vs. Olist's 7.3% through delivery performance analysis — diagnosed root cause using window functions and CTE-based ABC classification in SQL Server.
- Designed and built a star schema with 5 dimension tables and 4 fact tables by normalising 12 raw CSV files from 3 different data sources; handled messy data including inconsistent dates, typos, duplicates, and missing values.
- Calculated 12 business KPIs including inventory turnover, profit margin by category, late delivery rate, and customer sentiment score using Pandas groupby and SQL aggregations.
- Built 10 EDA visualisations using Matplotlib, revealing that Storage drives 35% of hardware revenue at only 0.55% profit margin — a key insight for product strategy.
- Developed Tableau dashboards to present supply chain performance metrics and business insights to stakeholders.

**Tools:** Python · Pandas · NumPy · Matplotlib · SQL Server · Tableau · Power BI

### SQL Product Management System | *Personal Project*

GitHub: [github.com/imransamiya817-debug/product-management-sql](https://github.com/imransamiya817-debug/product-management-sql)

- Designed and managed a relational database containing product, customer, and order data with a fully normalised schema.
- Wrote optimised SQL queries including CTEs, stored procedures, functions, and triggers to automate and streamline data processing workflows.
- Applied indexing techniques to improve query performance and ensured data consistency through transactions.
- Created reporting queries to support inventory tracking, order management, and operational monitoring.

**Tools:** SQL Server · T-SQL · Stored Procedures · Functions · Triggers · Indexing · CTEs

## EDUCATION

### Bachelor of Computer Applications (BCA)

Maharshi Dayanand Saraswati University, Rajasthan

2022 – 2025

### Diploma in Data Analytics

Primezone, Vile Parle, Mumbai
